

The Expert team

14 key issues you should consider before selecting a solution to address the security of your cloud services.

Regarding compliance

1. Does the Cloud solution let you define all security configurations for a specific cloud service at your glance (with a single click)?
2. Does the solution provide guidance for each configuration?
3. Does the solution monitor these configurations in real time?

Regarding ease of use

4. In the event of change in your cloud service configuration, does the solution reset the configuration to the defined preference?
5. Does the solution require the deployment of any hardware, software or agents (SaaS vs on premise solution?)
6. Is the solution in line with your Internet traffic?

Regarding breach detection and risk prediction

7. Does the solution let you define threat scenarios that are custom to your environment (such as the detection of unauthorized employee)?
8. Does the solution integrate real time intelligence feeds both from commercials and proprietary sources?
9. Can the solution detect malicious activity (i.e hackers infiltrating cloud services by using compromised credentials?)
10. Does the solution asset risks based on anomalous user and application behavior?
11. Does the solution provide insight into cloud activities across all cloud services?

Regarding SLA and Response Time

12. Does the solution automatically generate incident tickets to ensure that all risk events are tracked?
13. Does the solution provide built-in capabilities to manually and automatically remediate incidents?
14. Does the solution easily integrate with other security enterprise applications?
